*PCB
Phase-Out*

Jard has placed their final order for Aroclor 1016. During a phone conversation with Tom Paquin, Vice President Purchasing, on April 26. He advised me that Jard will use Monsanto Aroclor 1016 until October 1977. At that time they will shift to Prodelec, the French company, as their supplier of PCB capacitor impregnant. Paquin also indicated that Jard expects to use PCB until about May 1978. If this time table holds firm they will be using Prodelec material for about eight months.
