ADDRESS: PDC

FROM: R. N. Matherne

ADDRESS: BR Tower

SUBJECT: Asbestos Monitoring

DATE: August 29, 1986

I collected air samples at the PDC in ten selected areas where asbestos containing materials are known to be present. All of the samples were well below the 0.1 fiber/CC action level for asbestos. The values ranged from 0.002 to 0.01 fiber/CC of air. The results (Table I) represent area concentrations not employee exposure. Please note the analytical method counts all fibers and not just asbestos.

If you have any questions, please call.
