INTER-OFFICE CORRESPONDENCE

Date: January 30, 1976

From: F. C. Dehn

Location: 10 West

Subject: Lake Charles - VCM
Area Monitoring

To: J. A. Clapperton

During our EPA proposed VCM regulation review at Lake Charles, I acquired the attached data. The area's continuous monitoring unit in the VCM plant at Lake Charles has been in operation for some time. Bryant Walker has summarized the data that this unit provided for two relatively short periods of time. The nine area sample points were located in areas that were thought to be critical. The data speaks for itself.

It was recommended that Lake Charles relocate all the area's sample points at the VCM plant to represent areas selected on the basis of a statistical time motion study of operator exposure.
