

**4 Green Forced Draft Fans
4 Green Induced Draft Fans**
... Serve the West Junction Plant of
Houston Lighting & Power Company

Houston Lighting & Power Company is a leading factor in the power field of the great southwest. That it approved the selection of Green Draft Fans by the boiler manufacturer—in this case Riley Stoker—is evidence of high acceptance in the field. No utility can afford to operate with inferior or unsuitable equipment at any point. It must have equipment that is not only highly efficient but right.

To Houston Lighting & Power can be added other well-known recently completed utilities that are Green Fan plants, among them the following:

Central Hudson Gas & Electric Co.
Atlantic City Electric Co.
Virginia Electric & Power Co.
Monongahela Power Co.
Louisiana Power Light Co.
Kansas Gas & Electric Co.
El Paso Natural Gas Co.
Pacific Gas & Electric Co.
South Carolina Public Service Authority
Buffalo Niagara Electric Corp.

With utilities as with industrial power plants, it's so fast to "Go on Green" when it comes to draft fans.

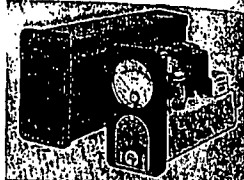

Our Catalog No. 168 tells all about Green Fans. Write for a copy.

More EQUIPMENT NEWS

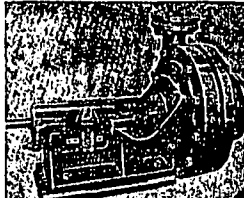

to 1900 F. and are reported to be better than ordinary mineral wool insulating blocks. Manufacturer claims blocks will stand higher temperatures, have greater breaking strength, and provide greater utility, are light in weight, easy to handle. Eagle Pitcher Co., 900 American Bldg., Cincinnati 1, Ohio.

Electronic Process Control

614 • New American system measures and controls temperature, pressure, differential pressure, liquid level and flow with virtually no lag in the transmission signal. All controllers can be installed in the control room regardless of distance from the process area. Control components are standardized to permit interchange at the panel regardless of the variable under control. Manning, Maxwell & Moore, Inc., Stratford, Conn.

For more data on these items, use post card # 165. Identify your request with item number.

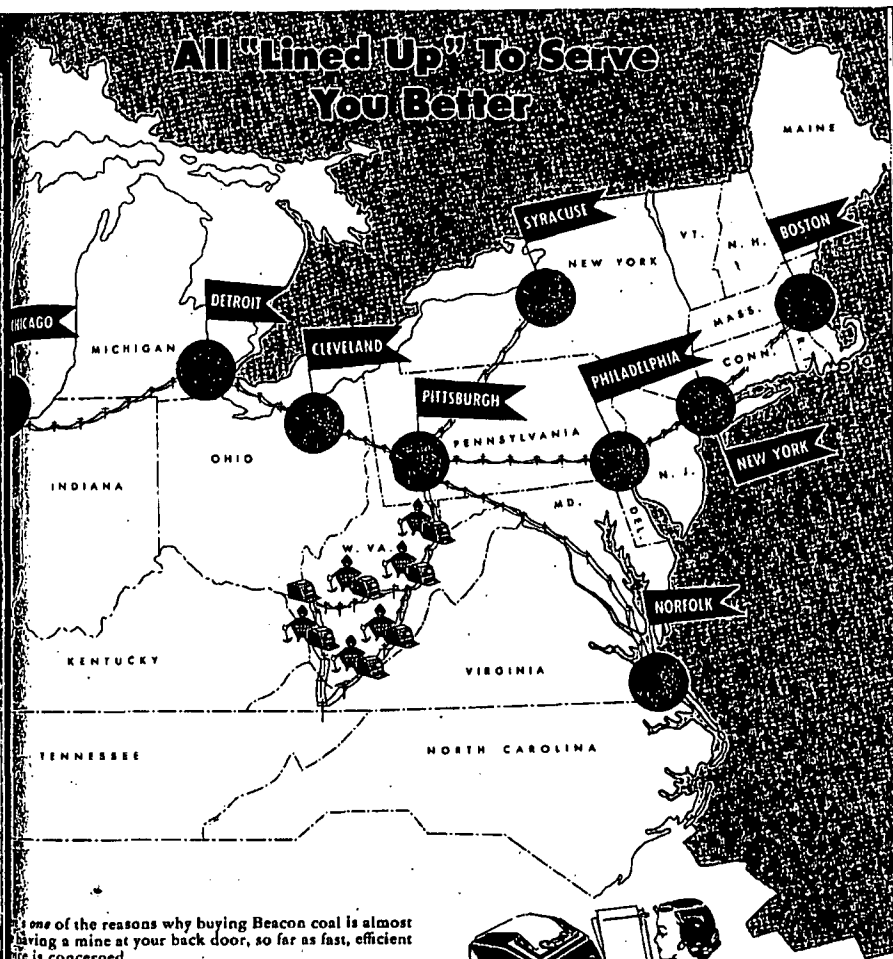

Plastic Centrifugal Pump

625 • Plastic pump handles acids, bases, salts, solvents, chemicals. Unit features solid plastic concentric casing and semi-open impeller. Long heavy bearing housing insures alignment, specially designed shaft and housing cap protects bearings from contamination. Fluid end parts are also made from corrosion-resistant plastic. Bearing housing can be replaced without disturbing pedestal alignment or casing. Unit is made in 3 in. suction and 2 in. discharge size. At 1750 rpm it handles capacities to 300 gpm, heads to 110 ft. Bulletins CP-P 11-51A and CP-PH 1-52. Mission Mfg Co., Centrifugal Pump Div., Houston, Tex.

Flame Retardant Plastic

653 • Flame retardant laminated plastic with consistently low 60-cycle power factor has application for switchgear, control

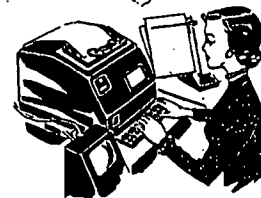

All "Lined Up" To Serve You Better

One of the reasons why buying Beacon coal is almost having a mine at your back door, so far as fast, efficient service is concerned.

Most of our mines, and all of our offices, are connected by a wide-spread Teletype network. Inquiries, expediting orders, and information on shipments are all handled as simply and completely as a local phone call. You get answers quickly—and more important, you get your coal when, where and as you want it.

Beacon quality coals are exactly suited to individual applications... and Beacon service is exactly suited to your individual needs.
