Knowledge of Asbestosis

Date: 1937

Source: Abstract of "Clinical aspects, diagnosis, and treatment of pneumoconiosis" by W. Irving Clark, in Ceramic Abstracts Compiled by The American Ceramic Society, Vol. 16, No. 5

Quote: "The two pneumoconioses which produce disability are silicosis and asbestosis...[The pathology] of asbestosis is characterized by an interstitial fibrosis involving the lower half of both lungs...The treatment of pneumoconiosis is preventive and symptomatic. The course ... of asbestosis is slow but eventually leads to incapacity due either to the disease itself or to a complication..."
