## Interoffice Communication

TO: Al Sather  
FROM: T. G. Grumbles  
DATE: May 31, 1984  
SUBJ: TRIALLYL ISOCYANURATE CHAIN COUPLING AGENT

I have reviewed the data you sent me on the subject additive. It appears to be a relatively non-toxic material, and a non-hazardous waste. The toxicity information from Mitsubishi would support the verbage on the DuPont MSDS. I should think the handling precautions would not be different than those currently used for AMS. Basically, guidelines should be developed to avoid skin contact. By copy of this letter, I am requesting Dr. Drumwright to assure no extra-ordinary medical precautions or directions would be necessary.

However, I would be interested in the plans for storage and handling. Please let me know when these are known.
