Dr. John T. Kelly
1229 - Second Street N.E.
Minneapolis, Minnesota

Dear Dr. Kelly:

You are perhaps aware that I am studying the effects of vermiculite on employees exposed to this kind of dust. I already have detailed information about the condition of the lungs of the three other employees of the B. F. Nelson Company. I also have similar information on several employees of another company with a similar dust exposure.

To complete my records I would like very much to have some details of the x-ray findings on Mr. Dennis Cleary. I believe you have been attending Mr. Cleary with the assistance of Dr. Middlebrook.

Our interest in this subject is to determine whether or not this type of dust is a serious hazard to health.

Very truly yours,

W. E. Park, M.D., Chief
Occupational Health Service
