

1 (Whereupon, slides were presented to the
2 jury.)

3 (Whereupon, the witness left the witness
4 stand.)

5 Q I would like to show you a chest X-ray for
6 Mr. Keith Grewe previously marked as Grewe Number
7 24-C, chest X-ray for North Arundel Hospital dated May
8 18, 1993.

9 Is that an appearance that is consistent or
10 typical of an individual with pleural mesothelioma?

11 A It is. What you basically see on the right
12 side here is relatively normal with -- the lung tissue
13 showing up is black because it doesn't have much
14 density because of all of the air, and the right side
15 here would be obscured by this density here which
16 could be that it is fluid there causing this density
17 or could be a combination of fluid or tumor that is
18 completely opacifying this left side of the chest or
19 could be all tumors.

20 Q Now, at that time in May of 1993 at North
21 Arundel there was a thoracentesis attempted?
