Att: Mr. Leon T. Gonshor

Dear Mr. Gonshor:

On May 14, 1970, an inspection of our facilities was conducted by Mr. Wesley E. Staub of the Department of Health and Mr. Donald Knight, Yarway Plant Engineer.

As a result of this tour, your letter of May 25, 1970 listed a number of recommendations. The list below reflects our compliance with your recommendations.

1. The heated metal tanks are only used with full time supervision and liquid temperatures are taken throughout the period of operation. Because of the close attention this area receives, we do not feel it is necessary to install automatic controls. I do not feel that the close attention this area receives was known or taken into consideration at the time of your inspection.
2. The ultrasonic cleaners are part of a preventative maintenance program and receive frequent cleaning and water changes to assure safe operation.
3. Request approval in accordance with article #432, Section 6A, to recirculate air from the local exhaust ventilation systems at the following operations:

- A. Deburring area, abrasive blasting - 1 unit
(please see attached forms)
- B. Tool crib, electrical discharge
grinding - 2 units
Surface grinding - 1 unit
- C. Maintenance shop, wood sanding - 1 unit
(please see attached forms)

4. Label all solvent containers in accordance with article #432, Section 9.

A. All solvent containers have been labeled.

Respectfully submitted,

Donald S. Knight
