To the Occupational Health (Medical) Contacts
of MCA Member Firms

Dear Sirs:

One of our member companies has expressed interest in a study of decomposition products from polyvinyl chloride film resin formulations under heating short of ignition or combustion. It has been recommended that MCA call a meeting of representatives of those manufacturers having an interest in a collective approach to a technical information-gathering program which may involve funded research.

A meeting to explore the breadth of such interest is scheduled for Friday, March 1, in MCA's Conference Room, beginning at 10:00 AM. If your company might wish to actively participate in and support such a joint program, you are invited to arrange for representation at the meeting. Limiting the attendance to no more than two persons from each company would be appreciated.

Please let me know by telephone or TELEX (89-617) if your company plans to be represented, advising the name of your representative(s).

Sincerely,

ACC/mw
