GRIZZLY BRAKE LINING

Grizzly is the latest and most efficient type of lining available today. For present types of brakes, traffic conditions and driving requirements it is as nearly perfect as any lining can be made.

In Grizzly we rightly believe we offer a superior lining for present automotive requirements at minimum cost. We invite comparisons of performance and service, or any kind of tests, to prove that it will out-perform and out-wear any lining; which enables us to say it is equal to, or better than, other linings, and it costs less.

No Rubber—No Laminations

Grizzly is made from an asbestos-friction compounded material which has proved its superiority by thousands of miles of uninterrupted service in city-traffic, cross-country and mountain driving. It contains no rubber; is not an oil-filled or saturated material; and therefore is non-glazing. It has no plies or laminations to separate or roll up; and embodies no wire of any description in its wearing surface.

The asbestos fibres are mixed with the compound (not saturated); then moulded under hundreds of tons of pressure to an oversize, and cured that way (oversize); making a full moulded, solid, semi-rigid homogeneous body that retains the same co-efficient of friction throughout its entire life. It is then ground to exact size.

This construction results in great durability and high resistance to wear; and insures better installations with no chance of rivets scoring the drum. It also eliminates swelling or expansion and holds its friction at high temperatures.

More Than 25 Years Experience

We have been manufacturing brake lining for more than twenty-five years, and Grizzly is the ultimate result of all these years of specialized experience. During this time our linings have always set the standard for high quality and efficiency because our engineering and research departments have intensively studied automotive conditions and requirements, and their developments were sound fundamentally as well as in step with automotive progress.

Every Owner and Operator of Automotive Equipment Wants These Outstanding Advantages of

GRIZZLY BRAKE LINING

1. **QUICKER, SMOOTHER STOPS**

   with softer pedal under all conditions of service; giving better braking power and greatly increasing the factor of safety as well as the ease of driving in traffic and on the highway.

2. **LONGER WEAR**

   Due to the extraordinary density of the material, moulded under hundreds of tons pressure, it wears smoothly and evenly and retains a uniform co-efficient of friction right down to the grid base.

3. **MINIMUM TENDENCY TO SCORE DRUMS**

   because of its smooth, hard surface which prevents sand, grit or other foreign matter from settling and becoming imbedded in it. No wires of any description are embodied in the wearing body of the brake material.

4. **DOES NOT LOSE FRICTION**

   at high temperatures due to the precisely controlled mix of special asbestos-friction compound, the total absence of rubber and other so-called binders, and our exclusive method of construction.

5. **DOES NOT ABSORB OIL, GREASE, WATER**

   The dense material, moulded under hundreds of tons of pressure and cured under extreme heat, is non-absorbent; and is impervious to these destructive elements.

6. **WILL NOT PULL OFF OR WORK LOOSE**

   The wire grid back serves as a foundation binder, gives strong support to the rivet heads, and prevents working loose or pulling off.

7. **NO EXPANSION OR SWELLING**

   Grizzly Brake Lining will withstand a direct heat greatly in excess of that encountered in usual braking action without showing any tendency to run, swell or lose friction. The result is freedom from adjustments.

8. **LOW COST PER MILE OF SERVICE**

   Grizzly's outstanding performance and unusually long life insures low cost per mile of service.

9. **ELIMINATES BRAKE TROUBLES**

   Grizzly's non-abrasive qualities reduce drum wear to a minimum, and consequently eliminates many brake troubles.

10. **UNCONDITIONALLY GUARANTEED**

    to give better brakes, softer pedal and longer wear on any type or make of automotive vehicle.

One Lining --- GRIZZLY --- Is All You Need

Seven Sizes in Rolls Will Service 90% of All Brake Lining Jobs

Note: 1 1/2, 1 3/4, 2 and 2 1/4x3/16 sizes furnished in .0175 oversize without additional charge. When ordering specify as 1 1/2x.205, etc.

Note. For thicknesses less than 1/32 use 1/32 List Prices
For intermediate thicknesses or widths use the List Price for the next larger size.

Legend. *This sign indicates fastest moving sizes. †This sign indicates next fastest moving sizes. No sign indicates slowest moving sizes

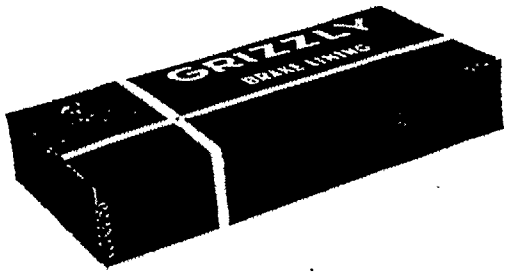

Grizzly Brake Lining will be furnished in rolls only up to 6 inches wide by 3/8 inch thick. 3/8 inch material will be furnished in rolls or segments as desired; thickness more than 3/8 inch in segments only

All rolls, regardless of widths when the thickness is LESS than 3/8ths of an inch are furnished in twenty five foot lengths;

All rolls, regardless of widths when the thickness is 3/8ths of an inch are furnished in three foot lengths.

MAR 004917

GRIZZLY SETS FOR POPULAR CARS

Grizzly Brake Lining is furnished in individually boxed sets for popular cars, Ford, Chevrolet, Plymouth, etc. The sets are packed in attractive display cartons and are furnished either **plain or drilled.** Each set, where the price is shown in **bold face figures,** will completely service a car. Easy to install on brake shoes, as each segment is correctly curved to fit the arc of the shoe. These sets are also furnished **not boxed; bulk, drilled or undrilled,** in case lots of **twenty-five,** at .15c per set lower than List Prices.

MAR 004921

The multiple coverage brake lining segments listed on the following page are offered to you so that with a small inventory you can service the very great majority of passenger cars, trucks, tractors, trailers, buses and axles. All segments of less than ⅜" thickness are 17½ thousands oversize, and all segments of ⅜" thickness and thicker are 20 thousands oversize. They are furnished in this manner so as to permit application to the shoes, buffing the lining after application and still delivering full thickness to your customers.

They are all furnished undrilled and each segment will service several B. L. M. A. numbers of various drum diameters (except segments of thicker than ½"), as they are formed to the smallest drum diameter in each group and are sufficiently flexible to be applied to shoes of the largest drum diameter in the group.

If you will refer to the Grizzly Time Saver (pages 18 to 43), you will find a list of all B. L. M. A. set numbers and information as to the quantity and number of multiple coverage segment to use for standard thickness application and for .16" oversize application if the drums have been turned

GRIZZLY "—BLOCKS

Reg. U.S. Pat. Off.

Grizzly also is available in block segments for all models of commercial cars, buses and trucks, as well as industrial equipment on which this type of lining can be used. They bring to such service an entirely new kind of smooth positive braking performance that provides absolute safety under all traffic, road and climatic conditions; plus thousands of miles of trouble-free service that insures maximum economy . . . Grizzly Blocks hold any load safely, and give smooth stops as fast as may be required in any emergency without grabbing, skidding, squalling or burning. See pages 27 to 31 for lists.

FOR QUOTATIONS ON SIZES OTHER THAN ABOVE, REFER TO FACTORY

Grizzly Heavy Duty Brake Lining material is furnished in segments only, cut to special length and curved to proper drum diameter. All measurements for internal type brakes should specify outside arc length. All measurements for external type brakes should specify inside arc length. **This is a rigid type material and it is absolutely necessary to specify drum diameter.** Also specify whether for internal or external type brake.

List Price $78.00

MAR 004928

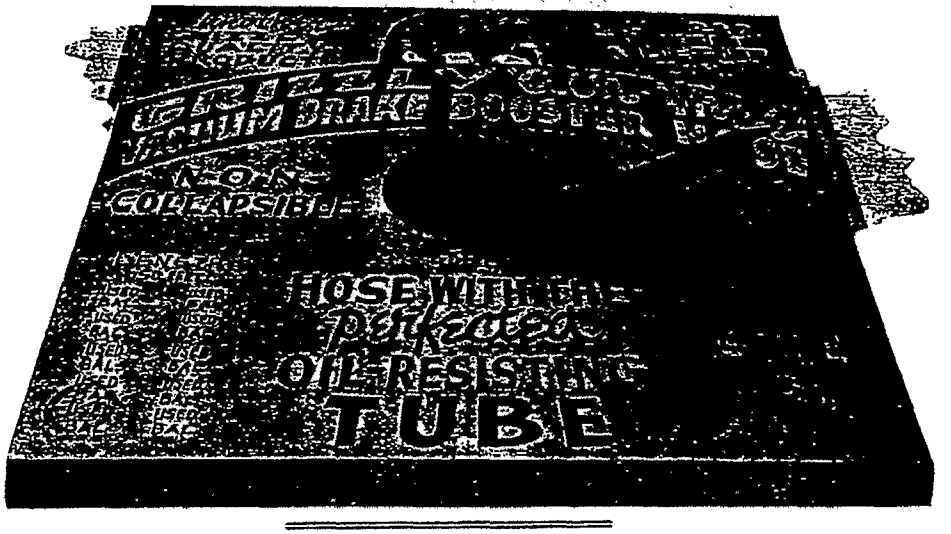

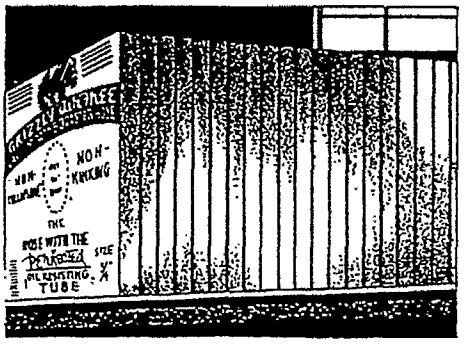

A superior vacuum brake booster hose that can be bent or twisted into any shape or space without kinking or buckling; assuring a full, unobstructed passage for air to the booster at all times.

Hose Size I. D.	Approx. Weight Per 100 ft.	Clamp Size
3/8"	20 lbs.	1/2"—3 ply
1/2"	35 lbs.	1/2"—4 ply
5/8"	44 lbs.	5/8"—4 ply
3/4"	52 lbs.	3/4"—4 ply
1"	72 lbs.	1 1/4"—3 ply

Packed 50 Feet of a Size in Cartons

The unretouched illustration above shows how Grizzly Vacuum Hose can be twisted spirally and bent almost double without kinking or buckling.

Grizzly cartons can be stacked in shelves, either flat or on end as shown above: always being readily accessible and occupying minimum space.

"Grizzly Quality Hose Costs No More"

By an entirely new and exclusive method of fabrication we have perfected a vastly superior booster hose that successfully withstands the severe twisting strains encountered in heavy duty truck and trailer service without kinking or buckling.

It also embodies the Grizzly perfected oil-resisting tube that insures better performance and longer life.

SUPPLIED IN CONVENIENT IMPROVED CARTONS

Grizzly cartons are an innovation in hose merchandising. They are convenient, easily handled, and eliminate the old procedure of numerous piles of hose of various sizes lying around in piles on the floor, with consequent time wasted searching for the size wanted. Cartons have circular openings through which hose can be withdrawn and cut as required. A convenient form in lower left hand corner permits accurate record of footage used and perpetual inventory of stock on hand.

THE GRIZZLY TIME SAVER

Complete data on sizes and list price covering all B. L. M. A. sets, compiled for you from the Grizzly price schedule.

Instructions for Using

1. Look in B. L. M. A. Data Book, alphabetical section, for car name ascertaining catalog number of set or sets needed to service vehicle.

2. Refer to Grizzly Time Saver (beginning below) which will show footage required per set and list price.

The Grizzly Time Saver has been computed to the nearest 5 cents and all lining figures are to the next highest inch in the case of fractional inches.

Example No. 1

Studebaker, 1939-38 K-13. You will note that this model car required the same identical set for both front and rear wheels.)

		Footage	Size	List
Front Axle	Set No. 1164	4 ft. 9 in.	2x1/4	$5.50
Rear Axle	Set No. 1164	4 ft. 9 in.	2x1/4	5.50
		9 ft. 4 in.		$11.00

Example No. 2

Oldsmobile, 1939 80 (L-39), 9 cyl. (You will note that this model car requires a different set for rear wheels than is required for front wheels, but the size of the lining is the same.)

		Footage	Size	List
Front Axle	Set No. 2000	3 ft. 8 in.	1-3/4x3/16	$3.15
Rear Axle	Set No. 286	3 ft. 11 in.	1-3/4x3/16	3.25
		7 ft. 7 in.		$6.40

Example No. 3

Cadillac, 1938 V-8-60. (You will note that this model car requires a different set for rear wheels than is required for front wheels and the size of the lining is different.)

		Footage	Size	List
Front Axle	Set No. 299	4 ft. 4 in.	2-1/4x3/16	$4.70
Rear Axle	Set No. 281	4 ft. 4 in.	2 x3/16	3.95
		8 ft. 8 in.		$8.65

Important

All sets are for one axle only—front or rear—as indicated by 1941 B. L. M. A. Data Book—not for both front and rear. All prices shown are for one axle sets except those prices which appear in boldface figures. Prices in boldface figures indicate such prices are for a complete set for both front and rear axle of the vehicle.

Explanation of Symbols

* Preceding the B.L.M.A. number indicates that such B.L.M.A. set may be cut from the four rolls in our No. 80 cabinet; also that you can purchase either of these four rolls (1-1/2x3/15, 1-3/4x3/16, 2x3/16 and 2-1/4x3/16) in .205 oversize at no extra cost.

** Preceding the B.L.M.A. number indicates that this B.L.M.A. set cannot be serviced from roll stock. Such blocks must be individually made for the particular vehicle and of the exact drum diameter or serviced with multiple coverage segments as indicated.

Ext. ‡ Preceding the B.L.M.A. number indicates that such B.L.M.A. set is an external type brake and therefore cannot be serviced with multiple coverage segments.

A Following the B. L. M. A. number indicates a special drilling the specific set.

F.C. Following the B. L. M. A. number indicates a full coverage block and only one block is required per shoe.

G Following the multiple coverage segment number indicates that such multiple coverage segment will service the B. L. M. A. number indicated by slightly grinding the segment to a lower thickness.

S Following the multiple coverage segment number indicates that such multiple coverage segment will service the B. L. M. A. number indicated by slightly reducing the width of the segment.

X Following the B. L. M. A. number indicates segments of 1/16" additional thickness oversize.

List Prices for Oversize Blocks

Oversize Blocks are designated by an "X" following the B. L. M. A. number to indicate an oversize of 1/16 inch; by "XX" following the B. L. M. A. number to indicate an oversize of 1/8 inch.

To determine the List Price of an "X" oversize block of 3/8 inch thickness or thicker, add 10% of the regular List Price, for an "XX" oversize block of 3/8 inch thickness or thicker, add 20% of the regular List Price.

NOTE: Our regular discounts apply from the higher List Prices of "X" and "XX" oversize blocks. They will not be carried in the warehouses and must be ordered from the factory.

IMPORTANT

All sets are for one axle only—front or rear—as indicated by 1941 B.L.M.A. Data Book—not for both front and rear. All prices shown are for one axle sets only except those prices which appear in **bold face figures**. Prices in **bold face figures** indicate such prices are for a complete set for both front and rear axle of the vehicle.

Explanation of Symbols

*Preceding the B.L.M.A. number indicates such B.L.M.A. set may be cut from the four rolls in our No. 80 cabinet; also that you can purchase either of these four rolls (1½ x 3/16, 1¾ x 3/16, 2 x 3/16 and 2¼ x 3/16) in .205 oversize at no extra cost.

**Preceding the B.L.M.A. number indicates that this B.L.M.A. set cannot be serviced from roll stock. Such blocks must be individually made for the particular vehicle and of the exact drum diameter or serviced with multiple coverage segments as indicated.

A Following the B.L.M.A. number indicates a special drilling for the specific set.

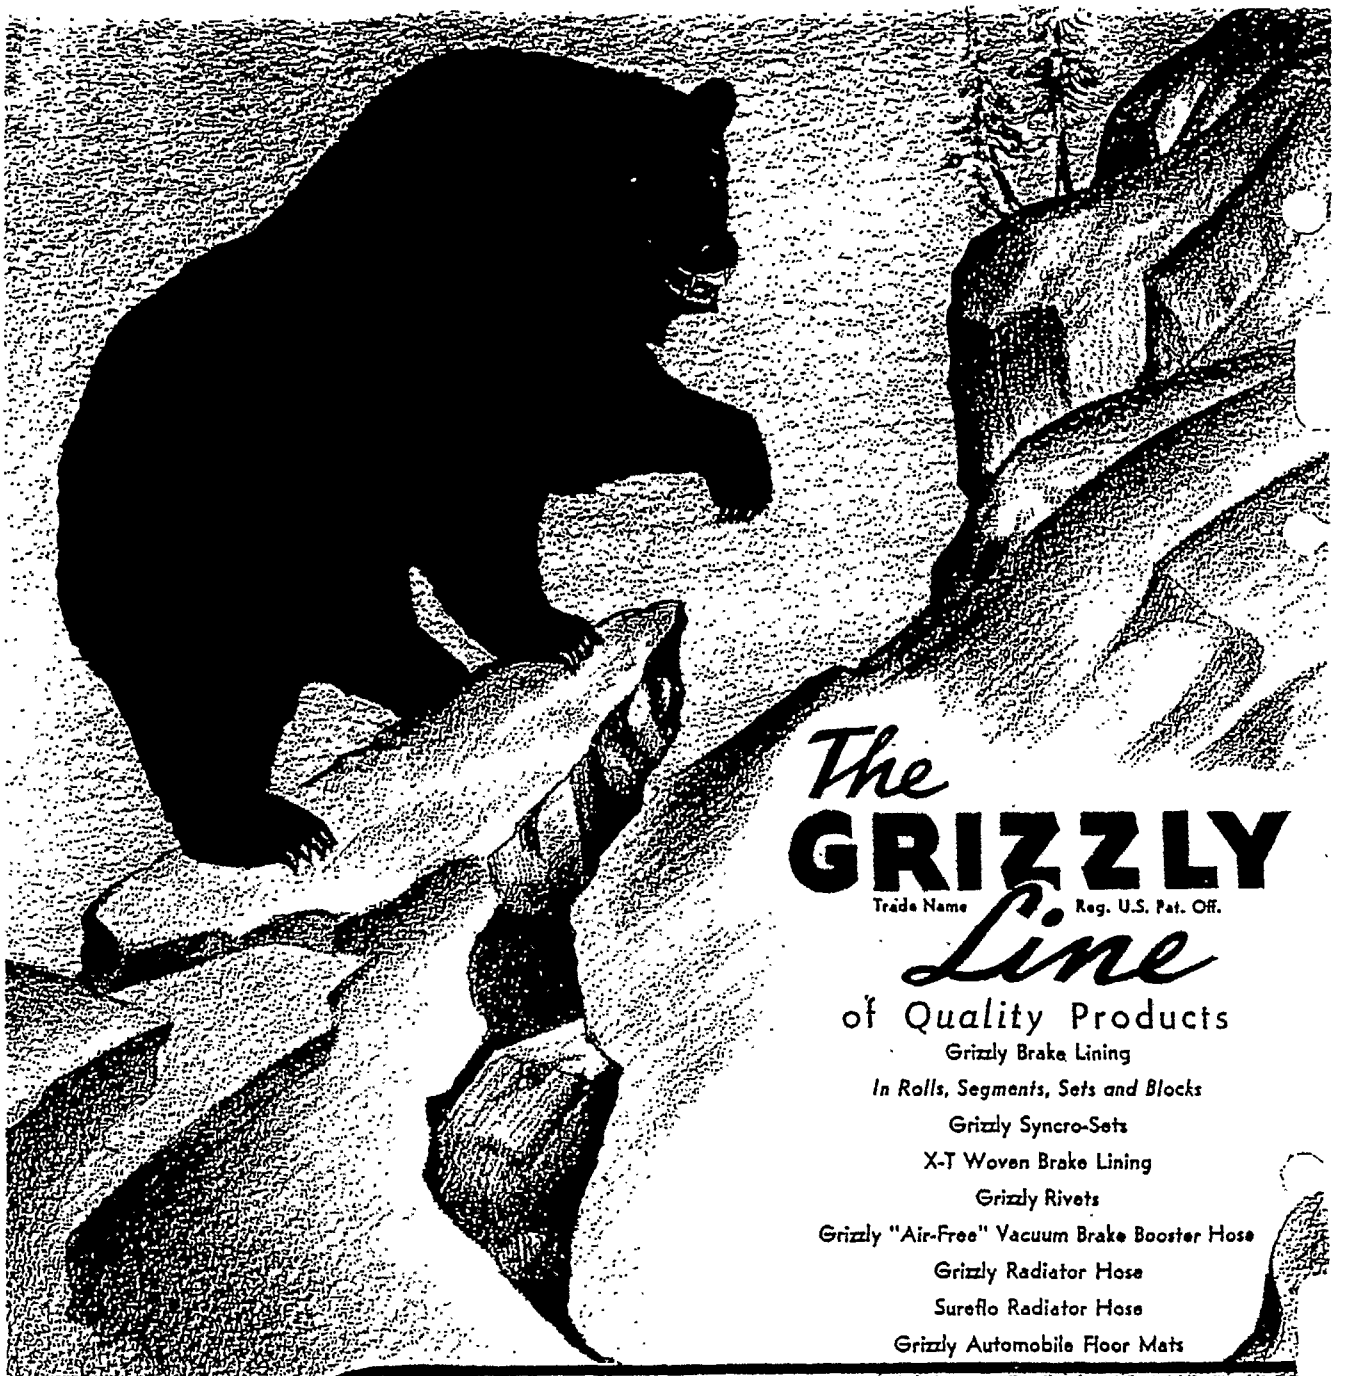

B Following the B.L.M.A. number 2007 indicates special drilling for certain Willys models only.

G Following the multiple coverage segment number indicates that such multiple coverage segment will service the B.L.M.A. number indicated by slightly grinding the segment to a lower thickness.

S Following the multiple coverage segment number indicates that such multiple coverage segment will service the B.L.M.A. number indicated by slightly reducing the width of the segment.

X Following the B.L.M.A. number indicates segments of 1/16 inch additional thickness oversize.
