

Inter-office Memo

TENNECO CHEMICALS, INC.

To	C. G. Thompson	At	Piscataway	Date	April 29, 1969
From	E. J. Hourihan	At	Burlington	Copy to	P. F. Albanese M. G. Caine R. S. Cole W. Neild N. J. Quist G. I. Rozand P. R. Scarito M. W. Williams
Subject	Reference: Your Memo, "Meeting at Burlington to Review Final Design"				

Regarding the VP-631 Conference Notes, paragraphs 1.2.10 and 1.6.2 should read "Tenneco Product" in place of "German". The Pilot Plant has already mikro-atomized some of our Burlington produced resin and we are currently awaiting its shipment to Burlington for the plant trial.

We also plan to evaluate Pulverizing Machine Company's Mikron Separator. This machine is a kind of hybrid between an atomizer and a classifier.

Process Engineering plans to process spot samples of the German unscreened resin through the Alpine sifter and run an evaluation on the screened resin. If the properties of the screened resin are such that we can use it in the production process, then all of this unscreened resin will have to be Alpine sifted.
