cause that I think is accepted in the United States right now, and this has been so extremely rare it is probably hardly worth mentioning, it is not statistically significant; there have been about 30 cases of mesothelioma reported in people who had other cancers for which they received therapeutic radiation. An example would be a kidney cancer, where the person was radiated through their abdomen, and 20 to 40 years later they have developed a mesothelioma in that site of radiation.

And there has now been about 30 cases reported in the entire world's literature since that was first reported many years ago. There was just an article that came out on that last year.

Q That was radiation, Doctor?

A That is therapeutic radiation. That is not the background radiation that, maybe we all would be exposed to in our daily lives.

Radon exists, that is a naturally decaying product of certain earth elements, et cetera.

Q How does that, which you have told us about
