

● The photographs show three Enterprise 400-kw, six-cylinder, four-cycle Diesel engines direct-connected to Elliott alternating-current generators with belt-driven exciters, turning out electric power for The Zinc Corporation, Ltd., Broken Hill, N.S.W., Australia. The engines are also equipped with Elliott-Buchi turbochargers. A shop view of one of these units was shown in the Autumn 1947 *Powerfax*. The units are semiportable.
