CONSULTING: ULTRAMICROANALYSIS • MICROSCOPY • SMALL PARTICLE PROBLEMS • SOLID-STATE CHEMISTRY

26 July 1983

Ms. Grace

~~Mr. G.~~ Roach
Colgate-Palmolive Company
300 Park Avenue
New York, New York 10022

Ms.
Dear ~~Mr.~~ Roach:

I have completed my asbestos analysis of a talc sample labeled RCT1004C, Lot #12873 and submitted under purchase order 096142.

The sample was examined with the transmission electron microscope and selected area electron diffraction. The sample was found to contain a very low level of chrysotile asbestos, probably less than 0.1% by weight. Because of the low amount, a second sample was prepared and examined to preclude the possibility of contamination. It too contained chrysotile. Two photomicrographs of chrysotile fibers are enclosed.

Thank you for consulting McCrone Associates. Please contact me if you have any questions regarding this analysis.

Sincerely,

Richard M. Ellis, Jr.
Research Microscopist
