Subject: Chemical Strategy For Sustainability

Dear [REDACTED],

I refer to our recent telephone conversation on the Chemical Strategy for Sustainability (CSS).

ISOPA, as the Chemical Industry in general, shares the vision of the CSS but at the same we are concerned that some actions under the CSS might impact negatively on the innovation power of our industry and our contribution to climate neutrality in 2050.

We attach for your reference our position paper and the list of priorities for ISOPA, after reviewing all actions under the CSS.

We listed the topics in the order of importance for our industry.

Especially the **Mixture Assessment Factor** might lead to disproportionate consequences for our industry,

Considering that Diisocyanates are already have been regulated via the restriction and the setting of EU wide OEL.

But also, the topic of "**Essential Use**" and the **intention to include professional uses** under **Restriction and Authorisation** are of concern to us.

I hope after digesting this information, we will have a chance to exchange views in a meeting (virtual or f2f).

Mit freundlichen Grüßen
