Subject TOXICITY STUDIES: OS-95

Enclosed are two copies of "Application for Toxicity Studies" for OS-95. A quart sample is on its way to you.

OS-95 is a new potential industrial fire-resistant fluid. It was designed to be a less expensive Pydraul than our current products. Laboratory data looks good and a drum has been submitted to a potential customer for pump tests. Will you please initiate whatever toxicity tests you feel are needed? > JTC

OS-95 is a mixture of Aroclors 1242 and 1248 with additive amounts of Santolube 393, Santolube 70, and Dow Corning DCF 200 silicone.
