Re: A19-9012
Dust Control - Small Tools
Our Phone Conversation of This Morning

It was indeed a pleasure to discuss with you the problem of fabricating Asbestos products with small tools in the field in a manner in which the dust count is less than five fibers per cubic centimeter.

I am enclosing some literature on vacuum equipment which we use in our plants for dust control which I promised you this morning.

Dr. Paul Earle of our Research Department and I will be happy to cooperate with you on the development and evaluation of small tools for Asbestos sheet fabrication and look forward to your visit to Denver to go into this problem in detail and review the work we have done to date.

Best personal regards.

Very truly yours,

William T. Donahue
Project Engineer Senior

September 15, 1978

Mr. A. D. Gilmour
Truland Corporation
P.O. Box 9174
Arlington, Va. 22209

Dear Mr. Gilmour:

With reference to your letter of September 6, we are attaching information on the safe handling of asbestos.

We gather from your letter that you are fabricating asbestos cement products and in the process, generating asbestos containing dust. We are also attaching a work practices manual for asbestos cement pipe. A similar manual for asbestos cement sheet should be available in the near future.

If we can be of any further assistance, please do not hesitate to contact us.

Yours very truly,

James F. Reis

Mr. Jim Reis
Asbestos Fiber Division, Johns-Manville
Ken-Caryl Ranch
Denver, Colorado 80217

Dear Mr. Reis:

We would appreciate more information on the safe handling of Asbestos since we utilize this material in asbestos-cement pipe and encounter it in other forms of insulation.

Sincerely,

TRULAND CORPORATION

Don Gilmour
