

Consistency

- Has the proposed effect been observed repeatedly under different circumstances?
- Mesothelioma has been repeatedly observed in persons exposed to chrysotile asbestos:

Mechanics who installed brake linings in England (Greenberg 1974)	Railroad workers using chrysotile insulation in Switzerland (Rattuner 1991)
Mechanics who installed brake linings in Denmark (Hansen 1989)	Italian worker in the wine filter industry (Scansetti 1984)
Individuals who simply lived in close proximity to a chrysotile asbestos textile and friction products manufacturing plant (Lieben & Pistawiza 1967) (Wolf 1987)
