The best of both worlds for you...

a truly revolutionary advance in thermostatic bellows steam traps.

- ☐ **All welded heat treated stainless steel.**
- ☐ **A *bellows* resistant to water hammer.**
- ☐ **For the rugged service no trap built on this principle ever could perform in the past.**

And yet this new revolutionary Nicholson innovation is interchangeable with all Nicholson hydraulically-formed convoluted bellows in existing traps. You know if ever you've used a Nicholson trap that it's a scientific sensing device with built-in spring action that snaps the trap closed when live steam contacts the bellows. Senses when to open the trap, too. When condensate causes the *slightest temperature drop, the bellows instantly compresses to open the valve* to discharge only condensate, air and all non-condensables — no live steam. No other trap ever had a comparable sensing instrument like the Nicholson thermostatic bellows. No other combines all its advantages except the Nicholson Welded Bellows trap. To prove it, ask us to send you a trial trap. Nicholson division of Dalron Systems, Inc., 12 Oregon Street, Wilkes-Barre, Pa. 18702. Telephone: (717) 824-8701.

The same. Only different.

Elliott introduced the YR single-stage steam turbine in 1947. It was an immediate success, because it satisfied the needs of practically every single-stage turbine user at the time.

Since then, user requirements for single-stage turbines have changed. Dozens of times. And Elliott has improved the YR to meet them.

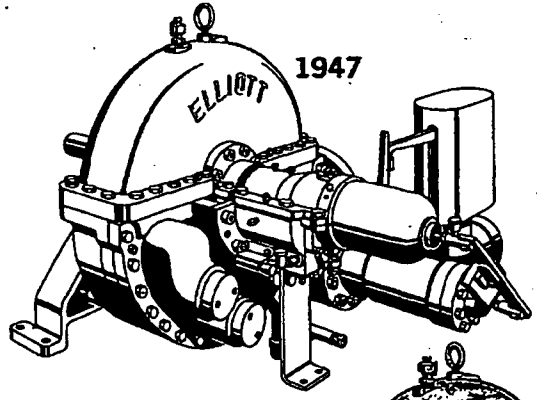

For 1972, we've made a few more improvements. Not to catch up. To stay ahead. And so we can keep on saying that the Elliott YR is the most up-to-date, most dependable single-stage turbine you can buy.

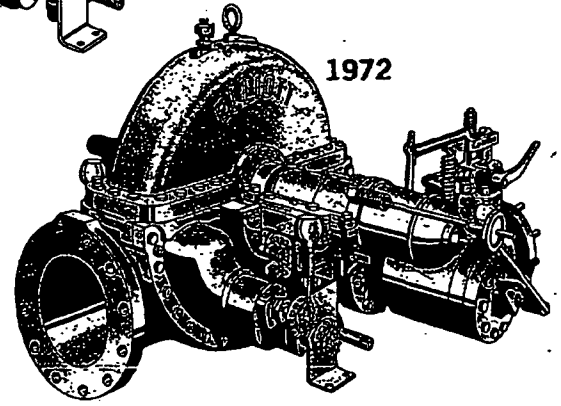

But—we still haven't changed the basics that made the YR a success in the first place. All Elliott YR's still share the same basic design and construction. So you can take advantage of the greatest possible interchangeability of parts. And be assured of service continuity and dependable operation.

Write to us now for a copy of our 11-page report on the new, improved old YR turbine.

Or call 412 527-2811.
