Subj: 1994 Greenwood Proposed
Monsanto Fund Budget

To: Marilyn Hartnett - B2NB

Attached please find the 1994 proposed Monsanto Fund budget for the Greenwood plant. As per our discussions we have kept this budget at a flat level which is reflective of the 25% total budget cut which we received in 1993.

Once again in 1994 the Greenwood plant, through the judicious use of the Monsanto Fund, has the opportunity to make a significant positive impact in the lives of those who live and work in this community. Our two largest project requests, the Laurens County Education Enrichment Foundation, and Lander University Biology Program, are both projects that will improve the level of environmental education in the surrounding area for many years to come.

Many of our smaller projects, such as a new algebra curriculum for Ninety Six High School, and a computer workstation for Ware Shoals High School are also indicative of the types of projects that can tremendously impact the lives of our young citizens with a comparatively small investment. These projects, and the others that we have proposed, reflect our continued overall focus on education, youth services, health, and cultural programs.

We appreciate your consideration of our proposed budget. I have enclosed project descriptions for several of the new projects for which we are requesting funding. If more information is needed concerning these, or any other projects, please let me know.

Through funding of these programs, the Monsanto Fund can build on its reputation of consistently improving the quality of life for the citizens of the Greenwood community.
