Schenectady, July 10th, 1934.

Mr. L. E. Barringer,
Room # 142,
Building # 2.

I thought you might be interested to know that the consensus of opinion at the recent medical meeting at Saranac Lake discredited the Jones theory that seracite was the all-important element in the production of so-called silicosis. Dr. Leroy W. Gardner, pathologist, has produced typical silicosis and silicotic skin reactions in animals with siliceous dusts that were pronounced entirely free from seracite.

Very truly yours,

BLV:S

E. L. Vosburgh, M. D.
