The material is required at the jobsite by 4/22/71. Just for the record I would like to recap what transpired in the ordering of the material for this job.

I received the material requirements on 4/6 at noon. After lunch I contacted Larry Henisee at the Customer Service Center, Cherry Hill, N. J. to check on the availability of two priority items and the cycle time of the entire order. On 4/7 A. M. Larry advised me that there weren't any priority items available and that the cycle was eight weeks. At this time I checked with other suppliers for comparable material. Also, I called the Branch to advise Jim Burrows of my problem; he wasn't in. I contacted OCF Indianapolis, Detroit and Kansas City to see if they could supply any of the hot items, without success. So I placed an order with Indianapolis S & C for Unibestos on these items 10 x 3 and 10 x 3½, total of 1176 LF. Later that same day I talked to Jim Burrows, after taking a look at the material requirements he requested that I go ahead and enter the order with the Plant and advise him of the order number and he would try to have the material on the job by the request dates of 4/22 on the priority items and 5/3 on the balance. Jim did do his best to get this accomplished but without success, so I cancelled the order with the Plant, and Unibestos and ordered the material from Kramig, Careytemp. Careytemp was Paul Gahn's decision. Kramig is promising to meet the dates that we need. The material requirements for this job will exceed 10M dollars.

Unibestos was promising a two week pending cycle, I couldn't accept a pending date.
