3/11

April 22, 1987

TO: Ad Hoc Group

FROM: Dorothy

*Dorothy*

We are scheduled to meet tomorrow beginning at 8:00 a.m; let's gather then in the lobby of the Channel Inn.

As I understand things -- and I may well be wrong about some of this -- there are at least five potential agenda items:

- Don's outline on the Ah factor, which he distributed last week;
- Pat's draft on cancer epi (attached) (Pat will provide the missing discussion section soon, workload permitting);
- Sherry Selevan's draft issues paper (attached) (she asked me to apologize for lack of final editing, etc.);
- Hugh expects to have an outline for genotoxicity;
- Bill expects to have material for the cancer discussion.

Also, please bring the following materials from your files:

1. The second working draft. (I have substantially revised this in line with your comments, particularly Don's written notes and Pat's suggestion that I move the discussion on the epi studies from Part V to Part III. However, I don't think it's useful to distribute another draft until we work on some of the issues listed above that have been troublesome for so long.)
2. Don's handouts on "background levels" and "Holmesburg." (This issue merit more discussion in view of the role that Don sees for it in the paper.)
