Re: Rudolph Dirck

Dear Sir:

It is my understanding that between the years of 1939 and 1945 Mr. [REDACTED] of Hamilton, Ohio, had investigative work performed under the direction of Dr. Kehoe. At this time Mr. [REDACTED] is under my care, having had multiple fractures apparently due to severe osteoporosis. I have been informed that it was decided at the Kettering Laboratories that Mr. [REDACTED] was suffering from lead poisoning or Addison's Disease, but cannot get any definite information from him or his family.

Any information that you might be able to forward to me would be greatly appreciated.

Yours truly,

Russell Alselder
