Cincinnati, Ohio

Dear Doctor:

I am certainly obliged to you for your constructive criticism of the proposed editorial in Metal Progress. Your suggestion that the problems may be of sufficient importance to warrant intensive study appears to me to be eminently sound. It is quite likely that my comments should be rather toward the thought that the use of lead in steel manufacture is likely to involve some serious hygienic problems, and before we get into it very deeply, it should be carefully considered and definite facts determined, whereupon to form a reasonably correct opinion.

Very sincerely yours,

E. E. Thum

Editor - Metal Progress
