MR. J. A. KING

D. M. CONNOR

MAY 4, 1981

1981 VCSA MEETING

Some suggested topics per your request are:

1. Corrosion update (reactors, strippers, recovery equipment and incineration or other primary emission control device).
2. Effluent problems, particularly with regard to POTW's or NPDES permits.
3. Personnel monitoring.
4. Engineering safeguards to prevent opening the wrong reactor.
5. Update on OSHA and EPA inspections.

Question - Have any PVC manufacturers been fined for excursions as listed in semi-annual reports?

I also believe that we should return to the system whereby the production plants alternate in having a representative at the VCSA meetings.
