

HOMOGENEOUS LEAD-LINED TANKS

Partial List of Products made by the Chemical Equipment Mfg. Company:

Vacuum evaporators, vacuum tanks, steam jacketed kettles, acid eggs, car tanks, digesters, autoclaves and agitators.

National Lead Company manufactures and sells the following related line of "United" products.

"United Tubond" chemical lead lined pipe and fittings for handling dilute sulphuric, sulphurous and other acids, mine acid, sea water, etc. (This equipment can also be lead lined.) And hard lead fittings, valves, cocks and pumps.

IN our homogeneous lead lined tanks and other equipment, the chemical lead is so securely bonded to the other metal that the two are practically inseparable. Jolts or sudden changes of temperature or pressure cannot loosen the lining which being of lead, provides a reliable, protective surface against the action of highly corrosive liquids. And, because there is no tinning, process temperatures almost as high as the lead itself can be used with safety.

For process or storage where ever corrosive liquids are handled, Homogeneous Lead Lined Equipment offers unique possibilities. Tell us your problems and let us show how this equipment can help you.
