LRS to GJL, 6/30/72 REK/WHH/EPW

L. R. Stark

The information submitted on EC-201 has been reviewed. This is a blend of materials, and we have toxicity information on the major components. Consequently, in confirmation of our earlier telephone conversation, there is no reason why you cannot submit a sample to the Bureau of Mines for testing of its fire resistance properties. If MCS 1330 passes the Bureau of Mines test, we shall then consider developing toxicity information on it.

/msa George J. Levinskas
