ANNISTON PLANT VPP CELEBRATION
OCTOBER 18, 1993

CURRENT PLANT ACTIVITIES/TOPICS

1) ISO 9000: The plant was issued an ISO 9002 Certification by DNV for all

DSW 133565

plant products in September 1993. Plans are underway to bring safety and environmental procedures into the ISO quality system.

2) Redesign: Business Redesign efforts are well underway with Maintenance, CPM, and P&T in progress. Lee Sparks, Local 125 ICWU president is serving on the maintenance redesign team along with and another mechanic and two operators. Support for the redesign process is strong.

3) Monsanto Big Table Negotiations: As negotiations between Monsanto and the unions continue, concern at the plant is running fairly high. Local 125 accepted the first company offer by a 2 to 1 margin, but there is a great deal of uncertainty as the contract expiration nears. Approximately 25% of Local 125 members are retirement eligible.

4) New Hires: The plant recently hired new operators to cover existing vacancies and future retirements. A hiring committee handled the interviews and made the final selection of 6 outstanding new employees.

5) DIPB/BDA: The plant dedicated significant resources in 1993 to further demonstrate and produce interim quantities of DIPB for BDA. Interest in this and other new product opportunities is high. In 1994, plans call for the plant to install distillation capability for DIPB.

Arniston

Core group is identified by 1st meeting before ~~the 14~~ Jan. '98

- Blinda Hamilton
- Allan Faust
- Robert Ames
- Brian Thornton
- Charlie McCartney
- Jerry Brown

group pilot
a group of 12 or so
names why

strategy prevention of mining technique
legal review

minimum 6, max 10
ground rules, followed by fund identification

6 mos. committed

2 things
- understand legal actions taken against site that can't be discussed
- 1) give a sense of issues in community relevant to remediation so can ~~plan~~ flexibly work to remove
to put things in place
- 2) ~~give~~ helping decide if should establish a CAP & a plan for how it
to be like
- given constraints of plant, would a CAP work to help with this
