

June 12, 1973

Mr. F. C. Johns
New York State Department of Labor
Division of Industrial Hygiene
2447 Sheridan Drive
Tonawanda, New York 14150

Subject: EPA-217-73, Man System 19

Dear Mr. Johns:

I have received your Form IA-236, second notice, dated June 7, 1973.

With reference to your requests outlined on Items #1, #3, #5, and #6, I have been advised by our consulting engineer in Buffalo, Mr. Earlard R. Harvey, that the proposed addition to our existing "Wheelabrator" dust dust system will not be efficient to adequately collect the dust generated in our port cement plant (see attached letter from Mr. Harvey). Mr. Harvey has proposed a much larger system with a capacity of approximately 15,000 C.F.M.

Since our original application for the addition of this system is complete, I have delayed answering your letter of June 7, 1973 until Mr. Harvey has completed the drawings for the new system as outlined in his letter. As soon as I receive his drawings, I will approve his layout, I will approve the drawings and fees for your approval.

Sincerely,

George Turner
Project Engineer
Hygiene Division
