Retest at Pensacola Plant

Dr. Kotin, Mr. A. K. McMillan and myself met with Dr. Beidleman today to review the employees who had been retested after their first test revealed some abnormalities. I will review each case and outline the results.

[redacted] - This employee is the one employee who turned up with AOL and we removed him from the PVC Plant. His first liver profile showed some abnormalities and upon retesting, one of the tests showed abnormal. In view of the AOL function and the one abnormality, Dr. Beidleman recommended and Dr. Kotin concurred, that this employee should have a liver scan.

[redacted] - This man had one abnormal liver function test and upon retesting, his Alpha Fetal Protein test was abnormal and Dr. Beidleman recommended with Dr. Kotin's concurrance, that this man undergo a liver scan.

[redacted] - This employee had two abnormal tests and upon retesting, the abnormalities were reduced but were still beyond normal limits. This employee will be retested in 90 days on those tests which were abnormal.

[redacted] - On the first test, this employee had one abnormal test and upon retesting, the one abnormal test was normal but two other tests were abnormal. The doctors agreed to repeat both tests in six months.

[redacted] - This employee had one abnormal test and upon retesting, the test was still abnormal and the doctors recommended a liver scan.

[redacted] - This employee had one abnormal test and upon retesting, the test was normal. However, the doctors recommended that this employee be advised to see his personal physician due to other causes.

AP00035097

[redacted] - Two abnormal tests on first testing and second testing. Due to the variables in these two tests, the doctors recommended that he be retested in three months.

[redacted] - This employee had one abnormal test and upon retesting, he had four abnormal tests. The doctors recommended a liver scan.

[redacted] One abnormal test on first testing and a slightly lower percentage on the second test and the doctors recommended that he be rechecked in six months.

[redacted] - One abnormal test and none on retesting. No recommendations.

[redacted] - This employee had more than one abnormal test and upon retesting, the tests were slightly above normal. Suggest retesting in three months.

Both doctors recommended that [redacted] be removed from any exposure to Vinyl Chloride Monomer.

They also recommended that [redacted] be removed from any exposure to PVC due to the possibility of ACL.

Dr. Kotin toured the plant and recommended that we use dust respirators in the PVC loading area immediately.

Dr. Beidleman called the plant and the arrangements are presently being made for the above employees.

Dr. Kotin informed me that he did not feel it necessary for him to return to the Pensacola Plant because he felt Dr. Beidleman was doing an excellent job and any questions could be resolved by telephone.
