Tile Conduit with ADSCO Filler Insulation—
a "Fiberglas" Product

Alignment Guide

Internally Guided Joint

Internally-Externally Guided Joint

Piston-Ring Type Joint

OVER 65 YEARS EXPERIENCE IS
BUILT INTO THE DESIGN AND
MANUFACTURE OF DEPENDABLE
ADSCO PRODUCTS FOR PIPE LINES

For over 65 years ADSCO engineers have specialized in the design and application of pipe fittings and accessory equipment for underground and surface steam, water, oil and other piping systems. An extensive, modern plant including foundry, machine shop, casing mill, shipping and storage facilities enable ADSCO to produce high grade products by skilled workmen under expert supervision.

**LEADING MAKERS OF
EXPANSION JOINTS**

As pioneer manufacturers of expansion joints for pipe lines, ADSCO is the largest single producer of such equipment in the world. We offer the most extensive line of packless and slip type joints in various types to meet the requirements of any pipe line expansion and contraction problem. In addition, ADSCO produces all of the related equipment necessary to the permanent installation of efficient pipe lines, including tile conduit for underground lines, pipe supports, saddle plates, alignment guides, steam traps, condensation and flow meters, storage and instantaneous water heaters, strainers, separators, man-hole frames, and vapor heating specialties.

ENGINEERING ASSISTANCE

ADSCO engineers welcome the opportunity of working with you in the solution of your pipe line expansion and contraction problems and correspondence is invited giving the details of any proposed piping installation.

WRITE FOR ADSCO CATALOG No. 35

All ADSCO products are illustrated and described in the latest ADSCO Catalog No. 35 containing informative data for the specification and purchase of dependable products for underground or surface pipe line distribution systems. Write for your copy today to the American District Steam Company, 65 Bryant St., North Tonawanda, New York.

Permanent Protection and Insulation for Underground Pipe Lines

BALTIMORE, MD.

CHARLOTTE, N. C.

RICHMOND, VA.

Also sold and installed by Johns-Manville
Construction Units in all principal cities.

Therm-O-Tile
REG. U.S. PAT. OFF.
**STEAM
CONDUIT SYSTEMS**

"Permanent" Protection is Important—Therm-O-Tile has been on the market over a dozen years. Its design is well known to all leading heating and ventilating engineers but we would again like to point to the great importance of "Permanent protection."

In previous issues of this book we stated that Therm-O-Tile is "A complete conduit system for the permanent support, protection, and insulation of underground mains for steam distribution."

Beware "Temporary" Protection

We consistently emphasize the word "permanent." It is easy to provide "temporary" protection and insulation for underground pipe lines. Threads and joints don't fail immediately, and foundations don't sag immediately, but unless the job is properly done it won't be long before water seeps in and ruins the insulation. With wet and spoiled insulation, efficiency drops drastically. And, unless the conduit is built on a solid foundation there will be sagging and collection of water in pockets. Be sure of a "permanent" job.

Therm-O-Tile Drainage System—In the Therm-O-Tile concrete base there is a drainage channel—clearly visible in this photo—which carries off all water that may enter the conduit from any source, thereby keeping the insulation permanently dry. Drainage is entirely internal. The channel is accurately and permanently sloped so that condensate or other pockets cannot form. Open to thorough inspection at any time at manholes. Ample large to keep the pipe space dry at all times.

"Spread Footing" Foundation—So that there will be no settling or sagging

the Therm-O-Tile "Spread Footing" foundation base is a thick concrete slab poured directly in the trench bottom as shown in the photograph. It is steel reinforced or placed on driven piles when installed over filled or boggy ground—constructions that are necessary for permanent protection.

See Previous Issues—In issues of this GUIDE previous to 1944 we gave details regarding the Tile Envelope which produces 27 different conduit cross sections. We told about the ideal accessibility of this conduit, its great strength, how it is water-proofed, and how the insulation is applied. For complete information ask for a copy of Bulletin 381.

Competitive in Cost—Despite the high efficiency, greater strength, dependability, and other outstanding features that are obtained in Therm-O-Tile, it is nevertheless competitive in total first cost. Final

The view above shows
"nearly everything." Note the
channel drain in the concrete base
which makes for "permanent protection" of the insulation and assures
continuous high efficiency.

cost is much less, thanks to its permanence. Thorough investigation is invited.

We Co-operate—Our engineers have had unusual and broad experience in the design and installation of steam conveying equipment for an exceptional range of purposes. They will gladly cooperate with you in the solution of your own individual problems of this nature.
