January 21, 1971
1 p.m.

Called Larry Batinkoff. Advised him that there were no changes in the arrangements. Also told him that USDA was trying to work out a salvage program with Campbell Soup. I thought we would know more on Friday.

January 22, 1971
8 a.m.
Called Dick Rice at the Ithaca Lab. Was advised that results would be out around Noon.

8:05
Called Larry Batinkoff and read to him the paragraph that would be in the General Manager's letter. He concurred with the wording.

January 21, 1971

Had a call from Al Llewellyn. He advised that he had had calls from Rosenthal and Eben Wiswell, the trucker from Manor. I did not tell Al the details of the situation but merely told him to listen and find out what he could and then I would visit with him later.

7:45 p.m.
I talked with Dan Dalrymple and explained to him that truckers were backing up on moving poultry. He advised that he would follow through on this with USDA.

January 22, 1971 (continued)

1:15 p.m.
Had a call from Dan Dalrymple. He advised that he had had a conference with USDA, FDA and Campbell Soup. He said that Dugin had told him that there was no chance of getting a level above 5 ppm for the whole chicken. He also advised that the only hope in this program is to get Campbell to start a salvage operation at their plant. He thinks this can be done, therefore, he has called a meeting for Tuesday in Albany at 11 a.m. He plans to have, in addition to Agway, representatives from Campbell, USDA, FDA, Mr. Batinkoff, Mr. Cohen, a Blue Seal representative present. He will also have someone from the College present. He is of the opinion that Cornell should become active in trying to determine the source of this contamination and that Campbell should set up a salvage program. I assured him that Agway would be present.

3:p.m.
Had a call from Dick Rice. He advised that he had received the following results.

A-840 Fish Meal	.35 ✓
A-704 Nucashmaker	.15 ✓
A-976 Bakery Bi-products	.45 ✓
Paint chips	6.5 ✓

January 22, 1971 (continued)

4 p.m.
Called Comm. Dalrymple and advised him of the results that we had received on the four tests.

12 p.m.
Talked with John Gallick and advised him to start Monday testing ten samples of feed per day in the Buffalo Lab. he is to check samples from all Feed mills. This can be done because they now have two samples from each mill each week. I agreed with Gallick that he could discontinue checking mercury for the time being.

5 p.m.
Talked with Batinkoff. Advised him of what we had found on our four samples and confirmed with him that the Commissioner had called him and invited him to the meeting. He seemed pleased that he was invited. Also told him that we would use our special feed, if after tests run on his birds next Tuesday, show that they were over the limits.

3:45 p.m.
Reported to Riley and Goddard the activities for the day. It was agreed that I should attend the meeting in Albany and submit a report.

We are advised that a Mr. Ziggler who is fed Inter-County birds has 128,000 for market. We are further advised that Campbell or USDA has found 15 ppm in these birds. I am also advised by the Commissioner that they have now tested 36 samples of fat from birds originating in the Sullivan County area and it appears that all are clean.
