

American Society of Refrigerating Engineers

40 West 40th Street, New York 18, N. Y.

The most rapidly growing magazine in the refrigeration field

LONG acknowledged the most authoritative periodical in the field, *Refrigerating Engineering* has added steadily to the practical value of its contents, and its number of readers has grown in proportion. A wide variety of material is presented, all from the viewpoint of its usefulness to the reader in his own business. This magazine is a must for men who keep in touch with all that is new and important in refrigeration and air conditioning. The annual subscription price is \$3.

THE REFRIGERATING DATA BOOK

IS an essential tool in the refrigeration and air conditioning industries. It has been published biennially since 1932 and appears in two volumes, published alternately—the Basic volume, now in its fifth edition, a standard reference work which deals with refrigeration cycles, fundamental data, industrial, domestic, and commercial systems, and air conditioning; the Refrigeration Applications volume, consisting wholly of practical how-it-is-done chapters on all the known applications of refrigeration and air conditioning. The current edition is dated 1946. Either volume sells for \$5.00 in the U. S.

REFRIGERATION ABSTRACTS

AJOURNAL devoted to abstracts of all worthwhile articles appearing on the

To keep apace with progress in refrigeration and air conditioning, read the publications and follow the activities of THE AMERICAN SOCIETY OF REFRIGERATING ENGINEERS, 40 West 40th St., New York 18, N. Y.

subject of refrigeration and air conditioning theory and applications in more than 300 current publications throughout the world. Prepared by a staff of experts, it is invaluable for those engaged in research, design, or in exploration of unfamiliar fields. Five issues annually at \$7.00. Subscriptions can be predated to include the January, 1946 issue. Additional information on request.

APPLICATION DATA BULLETINS

SOME 37 bulletins are available separately at reasonable prices for single copies or quantity orders and can also be had bound with a paper cover, the complete set for \$8.00.

The APPLICATION DATA Bulletins tell precisely how refrigeration is used in various fields, giving examples and specific information on the best practice up to date. Some of the subjects covered to date are: refrigeration of locker plants, fur storage, restaurants, liquids, apples and pears, skating rinks, butter and cheese making, milk plants, citrus fruits, beer dispensing, retail stores, wine making, load calculations, operation of ammonia machines, meat packing plants, etc.

CODES AND STANDARDS

THE ASRE further contributes to refrigeration progress by its participation in establishing codes and standards in the industry. Among the recent codes made available are: No. 14—Methods of Rating and Testing Mechanical Condensing Units; No. 21—Testing and Rating Milk Coolers; No. 22—Rating and Testing Water-cooled Refrigerant Condensers; No. 24—Rating and Testing Water and Brine Coolers.

MEMBERSHIP ACTIVITIES

IT is the policy of the ASRE to treat in its meetings current subjects touching upon all phases of the art of refrigeration. Membership is in several grades with dues from \$7.50 to \$15.00. Sections hold meetings in 27 principal cities. More detailed information will be sent if you wish.

Coal-Heat

20 W. Jackson Blvd., Chicago 4, Illinois

Phone Wabash 9464

FOR information on the use and sale of stokers, coal and coal heating equipment, you can turn to COAL-HEAT with complete confidence.

Here is a magazine that appeals to every man concerned with the market, use and sale of solid fuel and modern heating equipment. Having long since recognized the importance of properly designed efficiently operated, properly maintained equipment to the successful use of coal, and therefore to the welfare of the coal industry, COAL-HEAT constantly emphasizes the significance of the "equipment factor" in heating merchandising.

It is only natural that COAL-HEAT was the first trade magazine to recognize and promote the small stoker; to introduce many new developments in coal-burning equipment to further fuel conservation; to support the use of dustless treatment; and to urge the sale of equipment by coal men.

COAL-HEAT has at its disposal an almost unlimited number of sources of authentic information on the topics it covers; its articles are written by the best informed men in the coal, stoker and heating industries. It enjoys quite a following, not only among the most progressive merchants in these industries, but among the industry's leading combustion and heating engineers. For years it has championed the importance of the fuel engineer to the coal and stoker industries, and each year prints many articles for and

by fuel engineers.

COAL-HEAT's fundamental editorial policy is "to further the more satisfactory use and sale of coal and modern coal-burning equipment." It actively supports the application of scientific and engineering knowledge to the use of coal and coal-burning equipment. It covers both the merchandising and utilization of the coal, stokers and modern heating equipment.

With over a million stokers in use today, the

importance of COAL-HEAT's field is clearly evident. It has been and is COAL-HEAT's job to supply coal and stoker men with the information they need to insure satisfaction for stoker users. The same is true with hand-fired heating plants and all kinds of household and commercial coal heating equipment.

In addition to providing its readers with a basic and diversified editorial program, COAL-HEAT also publishes a number of books and booklets, manuals and reprints covering a wide range of subjects of interest to coal, stoker and heating men. Its series of heating guides for the consumer have proved particularly popular. These are available at small cost.

Subscription rates—\$2.00 a year; \$3.00 for two years in United States. Canadian and foreign rates \$3.00 a year.
