Dear Mr. Ednell:

As you know, the Asbestos we are using in Profax is of the Blue (Crocidolite) version.

The Crocidolite Asbestos appears to be less freely available than the other grades (for example, Chrysotile and Amosite), and the Crocidolite is also more expensive.

Although we have so far had no difficulty in obtaining the Crocidolite Asbestos Fibre, we are interested to know the reasons which led you to choose this type of Asbestos, over the other two. Any information you can give us on this matter would be very much appreciated.

Very truly yours,

FOSECO, INC.
