Trudeau Sanatorium
Saranac Lake, New York

Dear Art:

It has been quite a long time since we have discussed the silica fume study which you are carrying on for us in your laboratory. I am wondering now whether you could give me any sort of report on the progress of this activity. We are, of course, using the material in increasingly large amounts and naturally we are concerned about any possible toxic effects.

If you believe that we could accomplish more by having me go to Saranac to go over the reports with you, I would do so.

Sincerely yours,

EMK:H
