lost on the way down, the operator should not lower the blade to regain the load because of the danger of overturning Using the bowl as a brake is not good practice on a steep slope

How close to an excavation or the crest of a dump a machine can be safely operated depends on ground conditions Wet weather requires equipment to operate a greater distance from the edge or crest A signalman is especially essential when the ground is treacherous

Sometimes employees, the public, livestock, and property are endangered when material is pushed over the edge in side hill work In such cases, sufficient clearance below must be provided before the work begins
