Subject: AdEdge Invitation

Sydney, I sent this email this morning to Administrator Pruitt and heard back that unfortunately he is travelling out of town tomorrow. Since we have a long history with the EPA including work on the arsenic program a decade ago and now the award I referenced below, perhaps it would be beneficial if we could invite him to visit our facility in Atlanta and see how we have grown to be international leaders on treatment technologies for Groundwater. We are a success story driven from our relationship with the EPA and our collaboration has saved communities across the U.S. millions of dollars by our technologies. I look forward to hearing back from you.

Kindly, Rich

Dear Mr. Pruitt,

AdEdge is the recent recipient of the National Federal Laboratory Consortium technology transfer award with the EPA ORD group on biological technology for ammonia removal from drinking water called NoMonia. By happenstance I need to be in Washington D.C. tomorrow and Friday and realize it is a bold request to see if you had just a few minutes to meet.

We are excited about how this technology will benefit small communities in the Midwest and the relationship of working with the EPA to bring cutting edge technology to the market. It's a great positive story and I would love to share a little bit about what is going on.

I can be reached either by email or on my cell at 770-356-8394.

Best Regards, Rich
