Dr. Robert Kehoe
Kettering Laboratory
University of Cincinnati
Cincinnati, Ohio

Dear Doctor Kehoe:

I obtained urine and blood specimens this morning on two employees of Department ABS. These are second specimens of blood and urine on [REDACTED] and a second specimen of urine plus blood on [REDACTED]

[REDACTED] was transferred out of this area, at our [REDACTED] 29th. [REDACTED] has been at home, being treated by her local physician since April 9th.

[REDACTED] has improved symptomatically since leaving her job, but still has her head tremor and tremor of the hands. The lead line in her mouth is unchanged. Laboratory examination reveals a drop in the red count and hemoglobin and a marked increase in the stippling.

R.B.C.	3,670,000
Hemoglobin	72%
Stippling	312/50 F
Urine Alb.	0 - Sugar 0

[REDACTED] is asymptomatic at present. She herself offers the comment that she feels better since she is working in a cleaner area. Her laboratory examination reveals:

R.B.C.	4,210,000
Hemoglobin	85%

We shall send urine and blood samples on other employees later in the week.

Sincerely yours,

G. V. Mitchell, M. D.
Medical Supervisor
