R. C. Osthoff

Gentlemen:

At the suggestion of A. E. Peltosalo, a summary, "The Role of Polychlorinated Biphenyls In Electrical Equipment", was prepared that highlights the benefits in lay language while still giving enough background and discussion of risk to maintain credibility with the scientific community. It is expected that it will be useful as an executive summary and as a hand-out for customers who are disturbed about the reports on PCB's they have been seeing in the press. It was primarily prepared by Messrs. E. L. Simons and J. S. Nelson with assistance from R. J. Boudreau, O. H. LeBlanc, A. Pozefsky and E. L. Raab.

Very truly yours,

E. L. Raab

E. L. Raab, Manager
