Dr. Robert Kehoe.
Kettering Laboratories
U. of Cincinnati

Dear Dr. Kehoe -

I have under observation a 3 year old child who, at the age of 3 mos, had a diagnosis of lead poisoning. She comes in now with pica + tippling of her red blood cells.

The only constant potential source that we can fix is the water. I am wondering, if I were to obtain samples, send them to you, if you could help us see this case.

Sincerely yours

Robert R. Macdonald
