PLAINTIFF'S EXHIBIT

ACC-20

Identification of asbestos in all Chemicals locations was initiated in 1984. To date, out of the total 415 buildings in Chemicals locations, 176 (42%) have been identified as containing asbestos. Of the remaining buildings, 177 have no asbestos and 62 have yet to be surveyed. 80 (45%) of 176 buildings containing asbestos have been monitored for airborne levels and results showed all are below the OSHA action level of 0.1 fibers/c.c. (See attachment). Completion of asbestos survey for the remaining 62 buildings is scheduled by 12/31/89.

Please present the Chemicals Asbestos Standard to the Environmental Committee for approval. The implementation of this standard will minimize accidental exposure to asbestos.
