Subject: Environmental Exposure to Airborne Asbestos Fibers
Vulcan Forge Plant

A review of the Vulcan Plant Reveals the following:

1. Hammer operators wear one asbestos handpad (six operators per shift, three shifts).

No airborne asbestos fibers are evident.

2. Limited asbestos cloth is used sporadically by a welder per shift in fashioning maintenance welding spark shields.

Exposure of asbestos fibers is nil. Minute exposure may occur when cutting a piece from the roll not done with any regularity.
