Dr. Robert A. Kehoe, Director
Kettering Laboratory of Applied Physiology
College of Medicine, University of Cincinnati
Eden Avenue
Cincinnati 19, Ohio

Dear Doctor Kehoe:

May I express my sincere thanks for your long and most interesting letter. I confess that I have been rather reluctant to engage in such routine or commercial work. On the other hand, conditions at the Electric Storage Battery Company are so bad, as you know, and Doctor Lanahan's interest in improving these conditions so strong that I wanted to be of help. However, the ideas of the company differ so much from ours that we find it impossible to do the work for them. I will be glad, of course, to assist them if they establish a laboratory of their own.

I have read your suggestions very carefully and find myself practically in accord with them. I hope I do not impose on you if I ask you for some additional information. What method of collecting the urine samples do you recommend? I mean by this question how you overcome the inherent error due to collecting only one small sample.

Only recently, I have listened to a speech given by Doctor Hamlin in which he reported about strange findings which, in my opinion, result from the difference in sampling methods.

Thanking you again, I am

Very sincerely yours,

H. Brieger
