Recently we have devoted a great deal of effort to the replacement of asbestos in limestone joint cement products. Our progress has now progressed to the field trial stage.

The following raw materials are being shipped to your plant at Akron. Please hold for asbestos replacement trials.

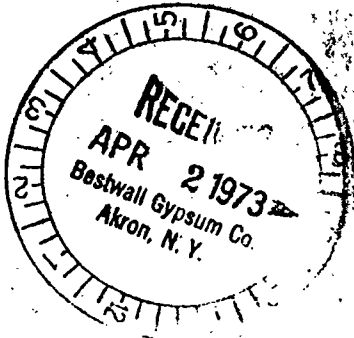

- 100 lbs. of Cemdiv 4928
- 200 lbs. of Celvatol 6000
- 750 lbs. of Attagel 40 (This should arrive within 10 days)
- Attagel 40 that is to be used in the new water

Please notify us when the raw materials arrive so that we can proceed as quickly as possible with our attempt to replace asbestos.
