Recent Regulatory Events (USA)

Vinyl Chloride

- EPA Standard: Proposed revisions in January as expected. Comment period closed. Final notice by early 1986?

NRDC challenged withdrawal of 1977 proposal. Case now being briefed.

- EPA Drinking Water Standards: Current draft rule sets maximum contaminant level at 1 ppb for VC, 5 ppb for several halogen compounds, and RMCL at zero. This is based on strength of the evidence of carcinogenicity, not strength of the carcinogen.
- FDA: Still paralyzed, but promises again a proposal on PVC use by December. It will be based on the constituent policy used for food-colors.

Proposed Stand. - Catag. for PVC

PVC

- Many local efforts to ban because of combustion toxicity.
- California EIR test program still in shambles.

*not done;
He, CO, etc*

Vinyl Acetate

- EPA proposed (8 August) its addition to Health and Safety Data Reporting Rule. *closed Sep 9 for comments*
- Chronic health studies have passed 18-month mark, with no reported ill effects.

DEHP

- Both FDA and CPSC continue to evaluate need for regulation in consumer products.
