Pydraul 312

Mr. Jim Galligan
Esco Corporation
2141 North West 25th Avenue
Portland, Oregon

Dear Jim:

I hope the Pydraul samples have arrived by now.
If not please let me know, as they were mailed
last week.

You may want to use the attached complete medical
analysis en leu of duplicating this medical
investigation yourself. Younger Laboratories
completed the analysis on our Pydraul 312 (then
a developmental fluid labeled MCS 312) on November
12, 1964. It's a pretty complete investigation.
Please note conclusions that the vapors, were
practically non-toxic under press conditions. It
is classed as a slight skin and eye irritant under
test conditions. As a suppliment, I'm attaching
a copy of the "Toxicity and Safe Handling Information"
on Pydraul 312 by Dr. R. Emmet Kelly.

According to the local Garlock office, the Chevron
packing should be replaced. They had no record of a
number 421 packing, so I assumed it was their number
432 cotton-duck-rubber material. Their suitable
replacement is a number 433 butyl packing. Compatible
packings are also offered by many of the companies
listed in our conversion booklet a copy of which is
attached.

We look forward to serving you through our Pydraul Fluids.

Sincerely,

D.R. Pogue
