Your letter 5-19-62

We have this letter and Mr. W. H. Boyd's comments about the making of Fibrous Adhesive. We note Grefco has a supply of 7 - K - 15 Asbestos which has a Canadian Standard mesh rating of 0 - 0 - 2 - 14. The 7 - M grade we use is a slightly smaller size having a screen size of 0 - 0 - 1 - 15. It also has the advantage of being \$5.00 - \$6.00 per ton less expense.

The material they have on hand will work, it's just more expensive. We use a ribbon mixer (dough mixer) for our blending of the silicate and fiber. Since there is so little difference in the fiber size, hardly noticeable, we are not sending a sample as requested, at this time.
