Subject: Asbestos Waste Disposal Procedures

Effective immediately, all asbestos waste generated at the Middletown Works must be disposed of as follows:

1. Jobs involving small amounts of asbestos waste can be cleaned up by using specially marked, heavy plastic bags stocked for this purpose. When filled, these should be sealed at top with a nylon ty-wrap and transported to Door-7 Storage Area. Sufficient care in handling these bags must be exercised to prevent holes, or tearing of the bag.

2. Jobs involving large amounts of bulky-type asbestos waste (Furnace liners, etc.) should use open-top steel drums. These drums when filled, should have cover and retaining ring in place, affix a 3½" x 5" warning label to drum, and transport to the Door-7 Storage Area. All drums should be completely filled before placing in storage area.

   Pre-labeled plastic bags are store-stocked under stock number 32-0976. 3½" x 5" Drum Warning labels are stocked under stock number ~~56~~-0230. Drums from Coil Paint (When available) will be stored South of the 600 Yard.

   54-023 Door 3

   Under no circumstances should asbestos wastes be disposed of in any other manner. The above regulations pertain to all Middletown Works personnel, and to all contractors involved with asbestos-related work.

Any questions concerning same can be directed to Bo Miller, Extension 3157, Middletown Works.
